

Glenwood Telecommunications, Inc.
Strang
Attachment D – Noncontiguous Areas

Strang grant would build fiber-to-the-home as a noncontiguous project. This project is made up of five noncontiguous areas that will connect to Glenwood's existing fiber network already in place in the community of Strang.

Glenwood's Strang's Project as designed will provide fiber broadband connectivity to 24 unserved and underserved locations in Strang by building off Glenwood's existing middle-mile fiber serving the Strang wireless tower.

These areas are noncontiguous and have a natural connection to one another, all within the Strang exchange. Glenwood respectfully ask that this application be considered as a single project.
