

NE PSC – 2026 Quarter 3 Update

July 2026 Supply Price Update

Historical and Future Pricing

Storage Outlook

Data source: U.S. Energy Information Administration

Note: The shaded area indicates the range between the historical minimum and maximum values for the weekly series from 2021 through 2025. The dashed vertical lines indicate current and year-ago weekly periods.

What factors are affecting natural gas prices?

- Strong global LNG demand continues to support U.S. exports at historically high levels, with new export capacity expected early 2027
- U.S. natural gas production remains near record levels at 109–110 Bcf/d
- Above-normal summer temperatures are driving increased power generation demand, resulting in higher natural gas consumption.
- Storage inventories remain modestly above the five-year average
