### Letter of Support

A letter of support from the North Platte Natural Resources District is provided in Attachment H\_4. If this application is approved, Vistabeam will provide the devices and connectivity for the Key Operational Locations described in Attachment J\_2 at no charge.

### Risk Factors or Legal Challenges

The primary risk factors for wireless network deployment are obtaining tower space, provisioning backhaul, and permitting. Vistabeam has already secured backhaul and tower leases for the project, and no permitting will be necessary.

Vistabeam does not expect material lead times or the availability of construction crews or wireless nodes to be risks for this project. We have already engaged our suppliers and will begin working with them as soon as our application is granted.
