

Attachment E – Technical Capabilities Statement

Experience Providing Broadband

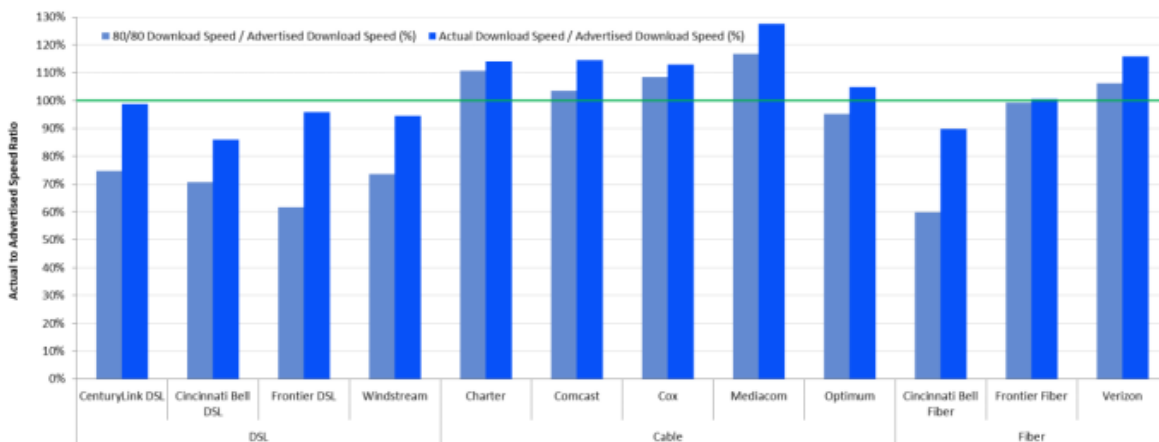

Charter, through our Spectrum brand of companies, is a leading broadband connectivity company and cable operator serving more than 32 million customers in 41 states, including approximately 167,000 customers in 91 Nebraska communities. Charter and our predecessor companies have been providing broadband internet service in Nebraska for decades. Over an advanced communications network, the company offers a full range of state-of-the-art residential and business services including Spectrum Internet®, TV, Mobile and Voice, including broad availability of Spectrum Internet Gig (up to 1000/1000 megabits per second (“Mbps”) in fiber-to-the premise (“FTTP”) areas).

Together with our 100,000+ employees nationwide, and over 270 employees in Nebraska, Charter is driving innovation and growing economies from coast to coast and in communities big and small. We will be able to draw upon the experience and capabilities of our national, regional, and local personnel serving these customers and communities to successfully complete Charter Communications – Lincoln County (the “Project”) in unincorporated Lincoln County north of North Platte, NE (the “Project Area”).

Charter is currently the second largest wireline broadband provider in the United States. Over the past five quarters, the Ookla Speedtest Intelligence reports have placed Charter/Spectrum in the top three fastest fixed broadband providers by download speed in the nation, ranking first three times.¹ U.S. News and World Report named Spectrum Internet as the “Best Internet Service Provider for Rural Areas” for 2021 (<https://www.usnews.com/360-reviews/internet-providers/best-rural>). Charter’s commitment to service quality has resulted in Multichannel News naming our Spectrum brand as Operator of the Year for 2020 (<https://www.nexttv.com/features/cover-story-charters-giffen-good>), CableFAX naming us “2021 MSO of the Year” (<https://www.cablefax.com/event/2021-cablefax-top-ops>), and CNET naming Spectrum the “Best Cable Internet Provider” for 2022 (<https://www.cnet.com/home/internet/best-cable-internet/>). Charter’s unparalleled commitment to service quality and the scalability and resiliency of our networks were especially evident in response to the pandemic. Charter’s network continued to perform well despite elevated levels of peak bandwidth usage. And Charter accomplished all this while making adjustments to how and where we worked in response to COVID protocols.

Charter is proud of the speeds we deliver over our network. In the latest FCC “Measuring Broadband America” report (<https://www.fcc.gov/reports-research/reports/measuring-broadband-america/measuring-fixed-broadband-twelfth-report>), Charter’s Spectrum internet service was shown to consistently offer as good as or better than advertised download and upload speeds, both during peak times and as an overall average, as indicated in the charts below.

¹ <https://www.speedtest.net/global-index/united-states?fixed#market-analysis>

Charter has invested more than \$40 billion in infrastructure and technology over the last five years as part of our long-term commitment to expanding broadband access across urban, suburban and rural areas to connect more Americans. Over that same period, Charter extended our network to reach an additional 4.6 million new homes and businesses, many in rural areas. Charter is also engaged in a \$5 billion dollar investment, offset by approximately \$1 billion awarded to Charter in the Federal Communication Commission’s (“FCC’s”) Rural Digital Opportunity Fund (“RDOF”) program, to connect more than a million currently-unserved, mostly rural families and small businesses to reliable broadband service with speeds of up to 1 Gigabit per second in both the downstream and upstream directions, including adding significant resources to our construction teams focused on adding approximately 115,000 miles of new infrastructure to our network.

Charter will use the same network deployment and operational procedures in the Project Area that we currently successfully employed across the country. These practices include documented and thoroughly tested methods of managing network performance, managing service issues at a network or customer level, and coordinating change management with minimal or no disruption to customers. All Spectrum-

branded services are delivered over Charter's state-of-the-art network and Charter backs them up with professional customer service and support from local technicians. This is the result of returning the work of thousands of customer service jobs from overseas to U.S. call centers and insourcing a significant portion of our technical workforce, prioritizing superior craftsmanship with every customer interaction. Charter is dedicated to bringing our clients innovative, reliable services, and responsible care.

If awarded grant funding, Charter will build fiber-to-the-premises ("FTTP") via Ethernet passive optical network ("FTTP EPON" or "EPON") technology to offer broadband internet to households and businesses in the Project Area and commits to maintaining minimum speed capability of 100Mbps/100Mbps in all locations for which the company receives support for fifteen years after receipt of grant funding. Current speed tiers and pricing for all our service areas – including what would be available in the Project Area – are discussed in Attachment F.

XXX

[END CONFIDENTIAL INFORMATION]

Charter's processes for monitoring and scaling up capacity are proven and effective. Charter's network design and capacity management processes will support ongoing growth and surges in demand in the future, both inside and outside of the Project Area.

Useful Life of Facilities

With respect to the useful life of Charter's network components, depreciation is recorded using the straight-line composite method over management's estimate of the useful lives of the related assets as follows (see Charter's 2022 Form 10-K at <https://ir.charter.com/static-files/60656fe0-803a-4aa0-8da8-30865d4899f1>, at page F-10:

- Cable distribution systems: 6-22 years
- Customer premise equipment and installations: 3-8 years
- Vehicles and equipment: 6-21 years
- Buildings and improvements: 8-40 years
- Furniture, fixtures and equipment: 2-10 years

Technical Ability of Staff

Charter's network is maintained by a highly dedicated, well-trained and experienced workforce. We offer a Department of Labor-certified Broadband Field Technician Apprenticeship program for our technicians and ensure that all Charter technicians are up to date on the latest technologies. With 270 employees in Nebraska, we will have ample technicians available for upkeep of our network in the Project Area around the clock. We also have regional and national network operation centers that monitor our network and coordinate necessary maintenance and repairs. These skilled staff persons are

supported by a structured maintenance manual, routine service checks, and regularly upgrades to cutting edge technology so that Charter's customers continue to receive high-speed and reliable service.
