

## **Great Plains Communications - Bloomfield Project**

### **Letter G**

#### **Business Plan – Scope of Work**

Great Plains Communications will construct 185,000 feet of new fiber optic facility within the City of Bloomfield, Nebraska. The project will be constructed with buried fiber plant. Great Plains will leverage 45,000 feet of existing buried conduit which will equal approximately 48% of the overall project. There will be 49,000 feet of new buried conduit installed. The project will pass approximately 603 homes and businesses. The newly constructed fiber plant will receive bandwidth from a Great Plains -owned and -operated extensive state and regional long-haul fiber network, which can provide multiple 100Gb bandwidth circuits for existing and future bandwidth needs in the City of Bloomfield from multiple regional Internet providers.

GPC has a proven track record of working with local community officials in Bloomfield on local zoning, right of way issues and permitting processes and we will continue to rely on our partnership with Bloomfield local officials to complete the fiber to the home project.
