IN THE MATTER OF THE NEBRASKA )  
PUBLIC SERVICE COMMISSION, ON ITS )  
OWN MOTION, TO CONSIDER REVISIONS )  
TO THE UNIVERSAL SERVICE FUND )  
CONTRIBUTION METHODOLOGY )  
\_\_\_\_\_ )

Application No. NUSF-100  
PI-193

**Rebuttal Testimony**

**of**

**William F. Kreutz**

**April 21, 2017**

REBUTTAL TESTIMONY OF  
WILLIAM F. KREUTZ  
APPLICATION NO. NUSF-100, PI-193

1    **Q.    Please state your name and business address.**

2    A.    My name is William F. Kreutz.  My business address is 4001 Rodney  
3           Parham Road, Little Rock, Arkansas 72212.

4

5    **Q.    By whom are you employed and in what capacity?**

6    A.    I am employed as the Senior Advisor—Policy and Strategy for  
7           Windstream Communications.<sup>1</sup>

8    **Q.    Have you previously presented testimony in this case?**

9    A.    Yes.  I filed direct testimony on March 24, 2017.

10

---

<sup>1</sup> In this testimony, I will refer to following entities as collectively as “Windstream:” McLeodUSA Telecommunications Services, LLC, PAETEC Communications, Inc., Windstream Communications, Inc., Windstream IT-Comm, LLC, Windstream KDL, Inc., Windstream Norlight, Inc., Windstream NTI, Inc., Windstream of the Midwest, Inc., Windstream Systems of the Midwest, Inc., Business Telecom, LLC, DeltaCom, LLC, and EarthLink Business, LLC.

REBUTTAL TESTIMONY OF  
WILLIAM F. KREUTZ  
APPLICATION NO. NUSF-100, PI-193

1    **Q.    What is the purpose of your rebuttal testimony?**

2    A.    I will respond to the direct testimony filed by other parties in this case. In  
3           particular, I will provide my evaluation of the proposals submitted by the  
4           Nebraska Public Service Commission's Staff ("Staff").

5    **Q.    Please summarize the direct testimony filed by other parties in this**  
6           **case.**

7    A.    Most parties to this case support a connections-based funding mechanism  
8           for the Nebraska Universal Service Fund ("NUSF"), but they found the  
9           specific mechanism proposed by the Commission—especially the multi-  
10          tiered business surcharges—to be problematic. In addition to raising many  
11          questions about how the surcharge was intended to be applied, the parties  
12          found it to be arbitrary, discriminatory, not competitively neutral, and  
13          difficult to administer and bill.

14   **Q.    What is your understanding of the alternatives proposed by Staff?**

15   A.    Staff proposes three alternative connections-based surcharge  
16          mechanisms that differ in the relative burden borne by different types of  
17          customers: residential, mobile, single-line business, and multi-line  
18          business. Under each of the alternatives, the customer would pay a flat,  
19          per-connection surcharge. Although the distinction between single-line

**REBUTTAL TESTIMONY OF  
WILLIAM F. KREUTZ  
APPLICATION NO. NUSF-100, PI-193**

1           and multi-line businesses is borrowed from the federal subscriber line  
2           charge ("SLC"), it does not appear that Staff's proposal is otherwise  
3           modelled after the SLC.

4   **Q.   What is your general assessment of Staff's approach?**

5   A.   Staff provides a good model for discussing the potential impacts of a  
6           connection-based surcharge methodology on different customer groups.  
7           However, Staff's approach, like the Commission's proposal, is based on  
8           several assumptions, and therefore it can only be evaluated as a  
9           hypothetical model.   Windstream and the other parties must have the  
10          opportunity to review and comment on a comprehensive Commission  
11          proposal before it is adopted.

12   **Q.   In your view, how should the universal service burden be spread**  
13          **among the various customer groups?**

14   A.   The guiding principle in distributing the universal service burden should be  
15          technological neutrality.  Therefore, if one were designing a surcharge rate  
16          design for the first time and in a perfect world, a TDM landline (whether a  
17          residential or single line or multi-line business), a wireless line, and a VoIP  
18          line should be assessed the same amount.  However, the reforms adopted  
19          by the Commission in this proceeding will have to consider the past

**REBUTTAL TESTIMONY OF  
WILLIAM F. KREUTZ  
APPLICATION NO. NUSF-100, PI-193**

1 practices of certain classes of customers being charged differently for  
2 similar services. In particular, the historical landline rate-setting practices  
3 of charging businesses higher rates than residential customers because of  
4 the relative value of telecommunications to businesses is a reality. Now  
5 that the Commission is embarking on moving to a connection-based  
6 contribution mechanism, should it adopt the past practices of having  
7 businesses pay a higher amount than residential customers? Or should it  
8 attempt to make all connections the same, regardless of the class of  
9 customers? These are difficult decisions which should not be made  
10 without accurate estimates of what the actual surcharge amounts will be  
11 so we can weigh the impacts on individual customer groups. Moreover,  
12 the class of customer distinction should also be technologically neutral. In  
13 other words, all other things being equal, a landline TDM business  
14 customer should be assessed the same amount as a wireless or VoIP  
15 business customer. However, all Staff's alternatives include a "one size  
16 fits all" wireless rate that does not differentiate between residential and  
17 business customers.

18 **Q. What observations do you have regarding Staff's alternatives?**

19 A. Staff should be commended for taking the lead in putting forth a range of  
20 contribution surcharge alternatives. The new alternatives are clearly

**REBUTTAL TESTIMONY OF  
WILLIAM F. KREUTZ  
APPLICATION NO. NUSF-100, PI-193**

1 better than the business tiered revenue approach set forth in the Order  
2 Seeking Further Comments and they are moving in the right direction. As  
3 discussed in my testimony and that of others, the Commission's proposal  
4 would have been confusing and administratively difficult to adopt. Overall,  
5 Staff's three alternatives each have some attractive components and also  
6 some items that cause concern.

7 **Observations:**

- 8 • All three alternatives result in estimates that wireless customers will  
9 contribute 40% (\$28M) of the \$71M proposed budget, whereas the  
10 wireless connections represent 72% of the connections. So, none  
11 of the three alternatives use a simple parity approach where all  
12 connections pay the same, regardless of technology or customer  
13 class.
- 14 • Both Alternative 1 and 2 have the same surcharge amount (\$1.29)  
15 for both Mobile Voice and Fixed Residential Voice. This is a step in  
16 the right direction.
- 17 • All three proposals within the Fixed Voice category retain the  
18 traditional practice of assessing business customers at a higher  
19 rate than residential customers, thus maintaining a value of service

**REBUTTAL TESTIMONY OF  
WILLIAM F. KREUTZ  
APPLICATION NO. NUSF-100, PI-193**

1           concept in the surcharge design. The Commission should consider  
2           whether the decades-old practice of charging businesses higher  
3           should be maintained.

4           • None of the three proposals adopt a business weighting in the  
5           Mobile Voice category, like that incorporated in all three of the  
6           Fixed Voice category alternatives. The Commission should  
7           consider whether the Mobile Voice business customers should  
8           have a higher surcharge amount than the Mobile Voice residential  
9           customers. If the business weighting concept is appropriate for the  
10          Fixed Voice customers, why is not also appropriate for Mobile  
11          Voice customers?

12          • The proposed surcharges for single-line business and multi-line  
13          business, compared to the residential surcharge, seem out of line.  
14          Taking into account the SLC design referenced in Staff's proposal,  
15          the residential and single line business SLC caps are the same.  
16          However, Alternative 1 would have a single line business  
17          customer's surcharge be 5.7 (\$7.35/\$1.29) times larger than the  
18          residential surcharge. Additionally, the multi-line business SLC cap  
19          is \$9.20 compared to the residential and single-line business SLC  
20          cap of \$6.50, or 41% higher, whereas the proposed surcharge for

**REBUTTAL TESTIMONY OF  
WILLIAM F. KREUTZ  
APPLICATION NO. NUSF-100, PI-193**

1 multi-line business customers is 8.1 (\$10.40/\$1.29) times larger  
2 than the residential surcharge. Similar disparities in the business  
3 line surcharges compared to residential surcharges are also  
4 incorporated into Alternative 2 and 3, although to lesser degrees.

5 **Q. Do you have questions about the administrative ease of**  
6 **implementing a connections-based surcharge?**

7 A. There needs to be absolute certainty on what is counted as a connection  
8 and how connections should be counted. On the mobile side, is every  
9 phone with a number counted as a connection so that family plans with  
10 three numbers are counted as three and not one for the family  
11 connection? How are PBX accounts counted? We recommend that not  
12 all of the stations behind the PBX should be counted; instead only the  
13 SLC-equivalent should be assessed. In addition, the surcharge amounts  
14 should not be based on input assumptions. Instead, actual connections  
15 data should be collected and analyzed to determine the exact surcharge  
16 amounts and how much funding they will generate. Finally, changing to  
17 a connections-based mechanism will require adequate time for billing  
18 system changes and testing to occur before implementation. Considering  
19 that all telecommunications providers will be impacted by such a change,  
20 a six-month transition period would be desirable.

REBUTTAL TESTIMONY OF  
WILLIAM F. KREUTZ  
APPLICATION NO. NUSF-100, PI-193

1   **Q.   Please summarize your testimony.**

2   A.   Windstream supports the Commission's proposal to convert to a  
3       connections-based approach to contributions. However, in moving to a  
4       connections-based approach, there will likely be disruptions to individual  
5       customers and customer groups compared to the current revenue-based  
6       method of assessing contributions. As always, there are some policy-  
7       related threshold questions that the Commission needs to decide when  
8       making a conversion. Should all connections be assessed in a technology  
9       neutral manner, whereby each connection regardless of type of  
10      technology is assessed the same? Or should business customers be  
11      assessed a higher surcharge on their connections since the connections  
12      to the telecommunications network are more valuable to the business  
13      customers? These are rate design questions that have policy and  
14      practical impacts to individual customers depending upon what the  
15      Commission decides. And, inevitably, under the alternatives presented by  
16      Staff, whenever one customer class surcharge changes another customer  
17      class surcharge changes in the opposite direction, resulting in a sort of  
18      "whack-a-mole" effect.
