Anonymous Call Rejection

Anonymous Call Rejection (ACRV) allows subscribers to reject calls from parties who have a privacy feature that prevents the delivery of their calling number to the called party (i.e. Calling Number Delivery Blocking). When ACRV is active, the subscriber receives no alerting for a call that is rejected; the call is routed to a denial announcement and subsequently terminated. ACRV may help to ensure the personal privacy of customers who would rather not receive calls on which the calling number is deliberately made private. This feature is offered on a flat rate subscription basis to both residential and business subscribers.

Automatic Callback

Automatic Callback (AC) is an outgoing call management feature that allows subscribers who reach a busy number to dial an activation code (*66) to call the number back when it becomes idle. When the busy number becomes idle, the calling party receives ringing and upon answer by the calling party, the feature will automatically attempt to set up a call to the previously called busy number. This feature is offered on a flat rate basis to both residential and business subscribers.

Automatic Recall

Automatic Recall (AR) is an incoming call management feature that enables a subscriber to dial an access code (*69) and have a call returned to the last calling party. This feature is offered on a flat rate subscription basis to both residential and business subscribers.
