1. Applicants for service or existing Customers who cannot establish a satisfactory credit standing with the Company may be required at any time to provide the Company a security deposit. The deposit requested will be in cash or the equivalent of cash, and will be held as a guarantee for the payment of charges. A deposit does not relieve the Customer of the responsibility for the prompt payment of bills on presentation. The deposit will not exceed an amount equal to:
 - (a) two month's charges for a service or facility which has a minimum payment period of one month; or
 - (b) the charges that would apply for the minimum payment period for a service or facility which has a minimum payment period of more than one month; except that the deposit may include an additional amount in event that a termination charge is applicable. In addition, the Company shall be entitled to require such an applicant or Customer to pay all its bills within a specified period of time, and to make such payments in cash or the equivalent of cash. At the Company's option, such deposit may be refunded to the Customer's account at any time. Also, the Company reserves the right to cease accepting and processing Service Orders after it has requested a security deposit and prior to the Customer's compliance with this request.

2. A residential applicant shall not be required to pay a deposit:

If it can be verified that the residential applicant has been an end-user of any telecommunications service provider in the State of Nebraska for the same type of service within the last two years and is not currently delinquent in payment of any such telecommunications service provider account, unless the applicant during the last twelve (12) consecutive months was delinquent in the payment of a telecommunications service provider account on more than two (2) occasions, presented a dishonored check for payment of a telecommunications service account or had service disconnected due to nonpayment of a telecommunications service.

- (a) If the residential applicant furnishes in writing, a satisfactory guarantee to secure the payment of bills for the telecommunications service requested.
- (1) Unless otherwise agreed to by the guarantor, the guarantee shall be for the amount of deposit Pinpoint Communications, Inc. would normally require on the applicant's account. The amount of guarantee shall be clearly indicated on any documents or letters of guarantee signed by the guarantor.
- (2) When the residential customer has paid bills for telecommunications service for twelve (12) consecutive residential billings without having service disconnected for nonpayment of bills and without having more than two (2) occasions in which a bill was delinquent, did not present a dishonored check for payment and is not delinquent in the payment of current bills, Pinpoint Communications, Inc. shall void and return to the guarantor any documents or letters of guarantee.
3. The amount of the deposit for residential customers shall not exceed an amount equal to two (2) months local exchange charges and/or two (2) months toll charges determined by actual or anticipated usage. The deposit for local charges billed in advance shall include only one (1) month's such charges.
4. When a residential customer's deposit exceeds \$40, the customer may arrange to make the payment over three billing periods. However, the Company may allow a residential customer to extend the payments of any required deposit over a longer period of time to avoid undue hardship.

Interest on cash deposits shall be paid by Pinpoint Communications, Inc. at no less than the rate calculated as follows:

For all consumers deposits kept longer than 90 days, the interest rate shall be established the 1st day of January of each year to equal the average of the weekly percent annual yields of one (1) year U.S. Treasury Securities for September, October, and November of the preceding year. The interest rate shall be rounded to the nearest basis point. Such interest shall be calculated to December 1 of each year, and the payment shall be made by credit to customers' account on the December billing or at the request of the customer, the payment shall be made directly to the customer.

6. If a refund of the deposit is made within ninety (90) days of receipt of the deposit, no interest payment shall be made. The balance, if any, shall be returned to the customer within thirty (30) days after settlement of the consumer's account, either in person or by mailing it to the end-user's last known address.
10. If service is not connected, or after disconnection of service, Pinpoint Communications, Inc. shall promptly and automatically refund the customer's deposit plus accrued interest on the balance, if any, in excess of the unpaid bills for service furnished. 3.1.2 Local Line

Local Line provides the Customer with a single, voice-grade communications channel. Each Local Line will include a telephone number.

1. Custom Calling Features

Custom Calling Features are optional central office services furnished to individual line business and residence customers. Custom Calling Features are available where facilities and operating conditions permit.

(a) FEATURE DESCRIPTIONS -- BASIC

Call Forwarding: Allows a subscriber to program his or her telephone so that incoming calls are forwarded to another number.

Call Waiting: The subscriber, already involved in a call, receives a tone that another incoming call is waiting to be answered. The called party, hearing the call-waiting tone during the existing conversation, can choose to flash the hookswitch and connect to the incoming call. This feature includes Cancel Call Waiting which allows the subscriber to enter a code that disables the Call Waiting feature so that he or she will not hear a tone during a conversation with another party.

Speed Calling - 8 Numbers: Allows a subscriber to preprogram up to eight telephone numbers, and then access these numbers with the simple touch of one digit on his or her telephone set.

Three Way Calling: Allows a subscriber to conference in a third person to an existing call so all three people can speak together in the same conversation.

(b) FEATURE DESCRIPTIONS -- ENHANCED

Automatic Recall: Allows the subscriber to make an outgoing call to the last number that called the subscriber.

LOCAL EXCHANGE SERVICE

SECTION 3 - Service Descriptions, cont'd.**3.1 Local Exchange Service, cont'd.****3.1.2.1.(b) Enhanced Custom Calling Features**

Customer Originated Call Trace: Allows a subscriber to initiate a trace on an incoming "nuisance" call.

Line Number Block (per line block): Allows the party placing an outgoing call to have his or her line always blocked from having his or her number sent.

Call Number Block (per call block): Allows the party placing an outgoing call to have his or her call blocked from having his or her number sent.

Repeat Dialing: Allows a subscriber to continually redial the last number he or she originates, despite whether the call was completed or not.

Selective Call Acceptance: Allows the subscriber to create a list of telephone numbers. Incoming calls from these numbers are accepted. All other calls are forwarded to an announcement.

Selective Call Forwarding: Allows the subscriber to create a list of telephone numbers. Incoming calls from these numbers may be forwarded to another number instead of being completed at the subscriber's telephone number. All other calls are completed as usual.

Selective Call Rejection: Allows the subscriber to create a list of telephone numbers. Incoming calls from these numbers are forwarded to an announcement. All other calls are accepted.

Anonymous Call Rejection: Allows the subscriber to reject incoming calls from callers that intentionally block their caller identification information.

Selective Distinctive Alert: Allows the subscriber to create a list of telephone numbers. Incoming calls from these numbers ring in a distinctive sequence.

LOCAL EXCHANGE SERVICE

SECTION 3 - Service Descriptions, cont'd.**3.1 Local Exchange Service, cont'd.****3.1.2.1(b) Enhanced Custom Calling Features**

Call Forwarding Busy: Forwards all incoming calls to a customer defined alternate number when the customer's line is off hook.

Call Forwarding Do Not Answer: Forwards all incoming calls to a customer defined alternate number after a user defined number of rings.

Call Forwarding Remote Access: Allows the customer to edit, activate or deactivate Call Forwarding features remotely.

Call Forwarding of Call Waiting Calls: Provides the customer the capability to forward unanswered waiting calls to a subscriber-designated number by using the combined functions of Call Waiting and Call Forward Do Not Answer. An incoming call to a busy line first receives standard waiting treatment in which an audible tone is heard by the called party and audible ringing is heard by the calling party. If the call is not answered after a period of time equal to the time-out value of Call Forward Do Not Answer, the incoming call is given Call Forward Do Not Answer treatment and is forwarded to a subscriber designated number.

Remote Call Forwarding: Allows the customer to edit, activate or deactivate Call Forwarding features remotely. (T)

Distinctive Ring: Allows more than one directory number to terminate on a telephone line and telephone set. Each directory number has a distinctive ringing sequence.

Distinctive Ring with Call Waiting: Allows more than one directory number to terminate on a telephone line and telephone set with a distinctive call waiting tone, if the line is busy.

Long Distance Alert: This feature helps increase the completion of toll calls by providing a distinctive call waiting tone (if the line is off-hook) or a distinctive ringing cadence (if the line is on-hook) that alerts the subscriber to an incoming long distance call.

- (i) Enhancement - allows the assignment of Multiple Pilot Directory Numbers to a MLHG. Hunting can therefore begin at different points in the group depending on the number dialed.
- (ii) Non-Hunt Telephone Number - a MLHG can contain station lines which have associated non-hunt directory numbers. If the station line is busy on a call, another call to the non-hunt number will receive busy treatment. These non-hunt numbers are not in the MLHG and do not have access to the MLHG or MPH features.
- (iii) Preferential Hunt - permits a pre-hunt over a preferential list of station lines before hunting the entire MLHG. Each station can be associated with a particular preferential list within a MLHG.
- (iii) Secretarial - allows more than one Centrex line to hunt to the same line in a linear pattern.

Last Number Redial - Allows a designation of a station feature button to initiate redial of the last number called.

Conference Calling - up to 6 Way - Allows a user to add up to 6 additional parties to an existing call.

SECTION 3 - Service Descriptions, cont'd.**3.1 Local Exchange Service, cont'd.****3.1.5 ISDN-PRI SERVICE****GENERAL**

ISDN-PRI Service is an optional form of local exchange access based on the Primary Rate Interface (PRI) arrangement of the Integrated Services Digital Network (ISDN). ISDN-PRI Service is a high-capacity access path for communications providing voice or data transmission over the public network.

1. Explanation of Terms**Circuit Switching**

Circuit Switching is a switching technique in which an entire circuit or, in a digital switch equipped for ISDN, a specific selection of time slots, is dedicated to a given call.

ISDN Primary Rate Interface (PRI)

ISDN PRI is an alternative for individual local exchange access loop services such as Direct Inward Dialing (DID) and business trunks. It can also be used as loop transport for circuit-switched data applications. ISDN PRI is provisioned on the 1.544 megabit per second (mbps) bandwidth and uses the Integrated Services Digital Network (SDN) architecture to provide the customer with the capabilities of simultaneous access, transmission and switching of voice, data and imaging services via channelized transport. In addition, ISDN-PRI provides the customer with the service capabilities and features described in the following.

LOCAL EXCHANGE SERVICE

SECTION 3 - Service Descriptions, cont'd.**3.1 Local Exchange Service, cont'd.****3.1.5 ISDN-PRI SERVICE****1. Explanation of Terms, cont,d**

Integrated Services Digital Network

Integrated Services Digital Network (ISDN) describes the end-to-end digital telecommunications network architecture which provides for the simultaneous access, transmission and switching of voice, data and image services. These functions are provided via channelized transport facilities over a limited number of standard user-network interfaces. The ISDN architecture consists of digital switching systems which connect Primary Rate Interface lines to their servicing central office.

Network Interfaces

ISDN Primary Rate Interface is comprised of a limited set of standard user-network interfaces. The PRI customer premises equipment (CPE) located at the customer premises must be compatible with the network interface.

Optional Service Features Package

The Optional Service Features Package incorporates the optional features Calling Line Identification and Call-by-Call Service Selection.

Primary Rate Access Facility

The Primary Rate Access Facility provides a high-capacity access path at a transmission speed of 1.544 megabits per second (mbps) for communications between the customer's premises and the central office. Each Primary rate Access Facility supports one ISDN-PRI Interface Arrangement.

3.1.5 ISDN-PRI SERVICE

1. Explanation of Terms, cont,d

Primary Rate Interface (PRI) Arrangement

ISDN PRI Arrangement is a customer premises to central office service providing ISDN capabilities. The PRI arrangement consists of 23 "B" channels and one "D" channel or 24 "B" channels, which are defined as follows:

B Channel

The B channel is a 64 kilobit per second (kbps) channel used for information transfer between users. The B channel may be used in conjunction with circuit-switched service.

D Channel

The D channel is a 64 kilobit per second (kbps) channel that carries signaling and control for the B channels.

PRI Trunk Group

A PRI Trunk Group is a group of channels which are designated as one of the following:

- Incoming Exchange Trunk Group
- Outgoing Exchange Trunk Group
- Two-Way Exchange Trunk Group

LOCAL EXCHANGE SERVICE

SECTION 3 - Service Descriptions, cont'd.**3.1 Local Exchange Service, cont'd.****3.1.5 ISDN-PRI SERVICE****1. Explanation of Terms, cont,d****Simulated Facility Group**

A Simulated Facility Group is a software defined register used to limit the number of simultaneous calls with specific attributes.

2. Customers subscribing to ISDN-PRI must comply with ISDN Primary Rate Interface specifications as designated by the Telephone Company.

2. Service Capabilities

ISDN-PRI provides the capability to:

- a. Transport customer information in the form of circuit-switched voice or data up to 64 kbps over any B channel.
- b. Where available, one D channel can control up to 20 PRI Interface Arrangements depending on facility capabilities. In such cases, a single D channel in one PRI Interface Arrangement handles all the signaling and control requirements of multiple PRI Interface Arrangements in a specific grouping allowing supplemental PRI Interface Arrangements to consist of 24 B channels.
- c. Allow B channels to be designated for specific services, such as Incoming Exchange Trunks, Outgoing Exchange Trunks and Two-Way Exchange Trunks, or optionally configure channels to access Incoming and Outgoing Exchange Trunks on a per call basis. Two-way Exchange Trunks may not be accessed on a Call-by-Call basis.
- d. Allow the user to have access to the directory number of the calling party.

LOCAL EXCHANGE SERVICE

SECTION 3 - Service Descriptions, cont'd.**3.1 Local Exchange Service, cont'd.****3.1.5 ISDN-PRI SERVICE****3. Conditions**

Customers subscribing to ISDN-PRI must comply with ISDN Primary Rate Interface specifications as designed by the Company.

- a. Feature availability and service capabilities are dependent on the facilities and digital technology providing the service.
- b. ISDN compatible terminal equipment is a requirement for operation. It is the customer's responsibility to power and obtain such equipment.
- c. ISDN-PRI service does not preclude the customer from originating or receiving circuit-switched voice calls from inside or outside either his/her serving central office or his/her Local Exchange Area. Where facilities are available, the customer will be able to originate and receive circuit-switched data calls outside of his/her serving central office.
- d. All PRI Interface Arrangement configurations must have at least one 23B+ D Interface Arrangement for signaling and control functions. A 23B + Back-up D Interface Arrangement is required whenever the ISDN-PRI Interface Arrangements ordered and in-service would otherwise cause more than 47 B-channels to be controlled by a single D channel.
